(57) Abstract:

A system for information management consists of a product, for instance a notepad sheet, which has a writing surface (3) with a position code (5), which codes a plurality of positions on the surface, and a device, which is adapted to record the information which is being written on the writing surface by detecting the position code. Moreover, on the product there are a number of activation icons (7a-g). When such an activation icon is detected by the device, the device initiates a predetermined operation which utilises the recorded information. Such an operation can, for instance, consist of sending the recorded information to an indicated address. A product, a device, a method and a computer program for information management are also shown.
